

Microsoft Technologies Advance Training

Fard-Solutions understands our clients' schedules do not allow for long travels to a distant training facility, which is why we created our Training Courses. Our students enjoy a real technical, "hands-on" and virtual experience on each student's personalized computer. That ensures each student's production environment is separated from one another physically to provide maximum performance and reliability.

Every student is assigned a production class server with:

2 X Quad Core CPU's

8 Gigabytes of RAM

500+ GB of Storage at 7,200 RPM

Dual Gigabit Ethernet Cards

Fard Solutions training lab utilizes our simple yet effective concept of
Learn it, Do it, Prove it.

Every category additionally consists of dynamically pushed lectures, "hands-on" labs, and a test at the quit of each lab session. Our Training instructions can accommodate up to 15 trainees per classroom. Fard Solutions ensures each and every scholar has all the equipment they need to prevail in each session. Additionally, we have pre-created coaching lessons and the capacity to custom-create Quest training courses that meet your company's particular needs.
